# NEGATIVE EDGE

Third-person action shooter on STEAM

EXPLORE → FIGHT → GET POINTS → LOOT AND UPGRADE → FIGHT HARDER

## CHALLENGE

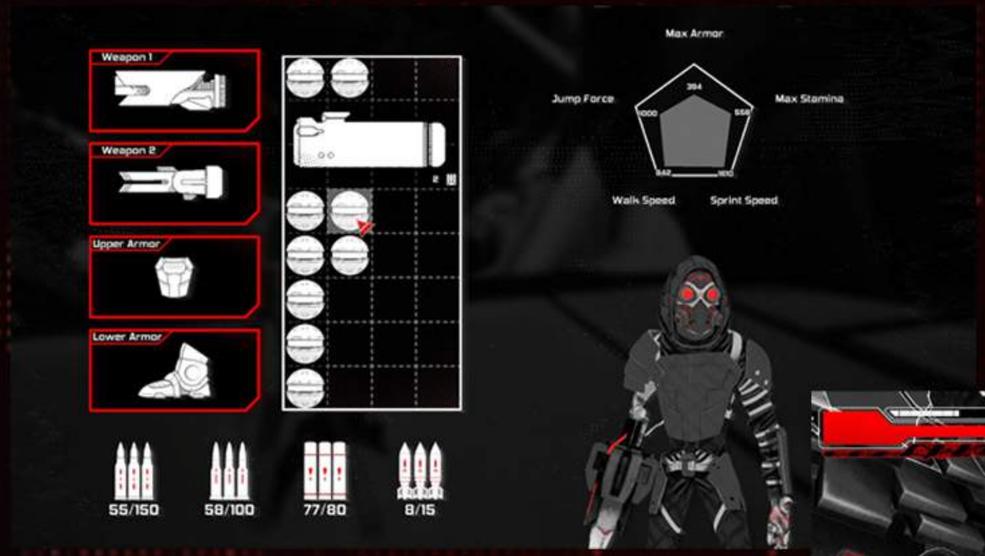

Design an interface that combines a comic-book aesthetic with cyber-punk elements while maintaining a noir, Sin City-inspired palette.

## COSTRAINTS

- Narrow color palette.
- Uncommon mix of visual styles.
- Clear gear rarity distinction

## SOLUTION

- Using red to highlight selections and points of interest.
- Combining comic-book and cyber-punk textures to create a striking visual contrast.
- Clear visual labels to communicate gear rarity.

## CHALLENGE

**Extend the noir aesthetic into the UI.**

## SOLUTION

***Adopting a Sin City-inspired approach: black as the base, white for definition, and red for emphasis.***

Before

After

After

Before

Before

After

Cursor designed to combine cyberpunk and comic-book aesthetics, with a red color treatment to remain clearly visible on screen.

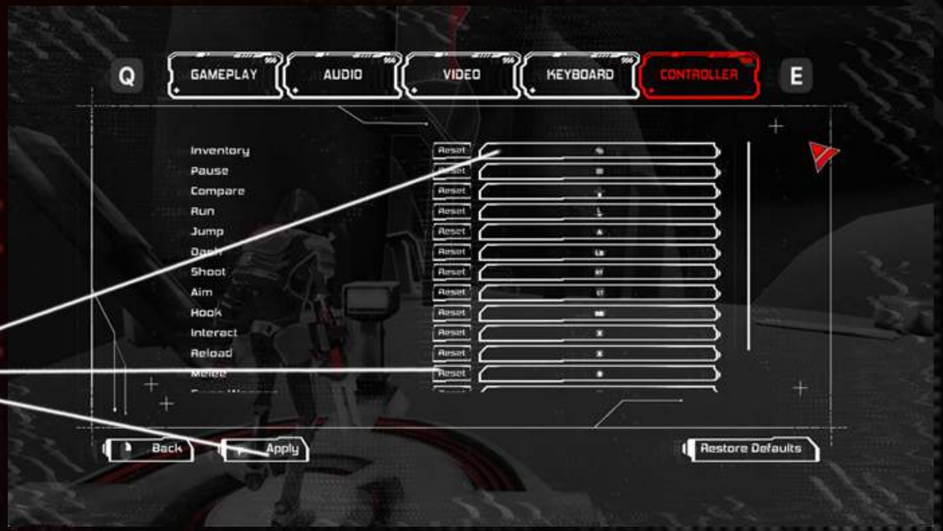

Selecting a button turns both its border and text red, while hovering only changes the border to red.

Multiple selections in the settings are marked with a red underline, keeping previously selected options visually identifiable.

Repurposed assets were adapted across different UI elements and buttons.

Different badges for weapons and armor indicate the rarity of acquired gear.

Health, melee, and shield bars combined into a single HUD element, using cyberpunk shapes with a cartoon-inspired texture.

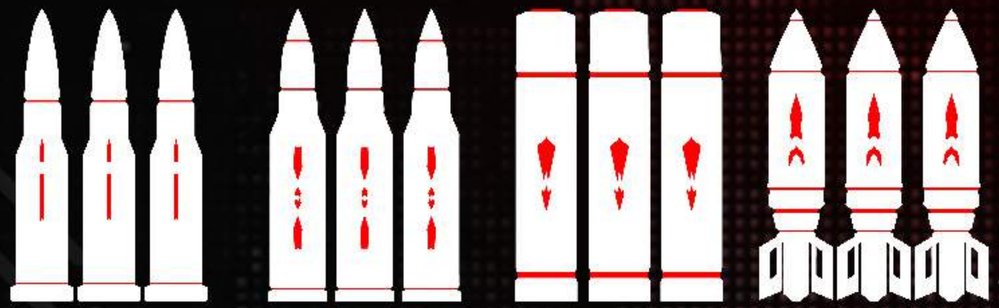

Cursor variations; the selected version offers the best balance of shape and visual weight.

Weapon box in the HUD, maintaining a minimal cyberpunk shape while using comic-book-style weapon textures.

Study of the in-game bullet icons, translated into 3D holographic-style assets. Because the game environment is quite dark, they were designed in white with red accents.

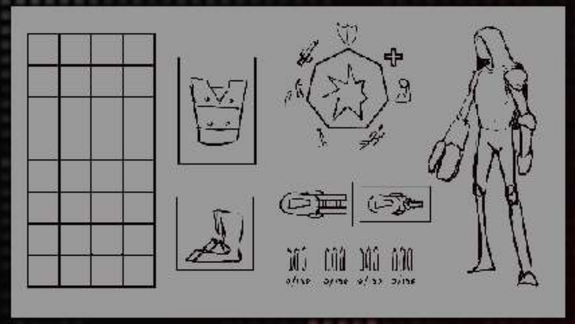

# WEAPON ANIMATION

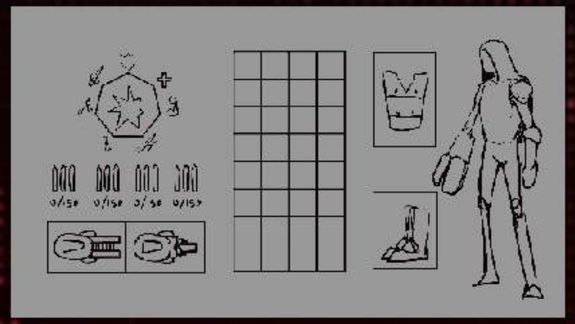

Weapon animations were designed to preserve the game's cyberpunk language while providing clear visual feedback when equipment changes.

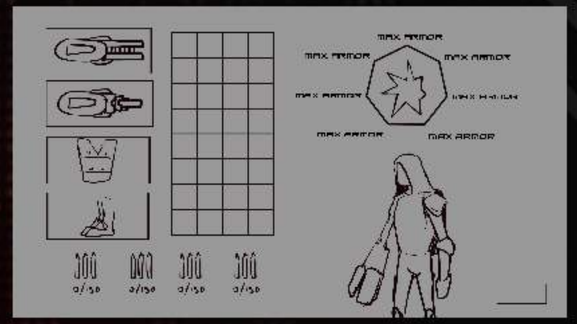

# Inventory study

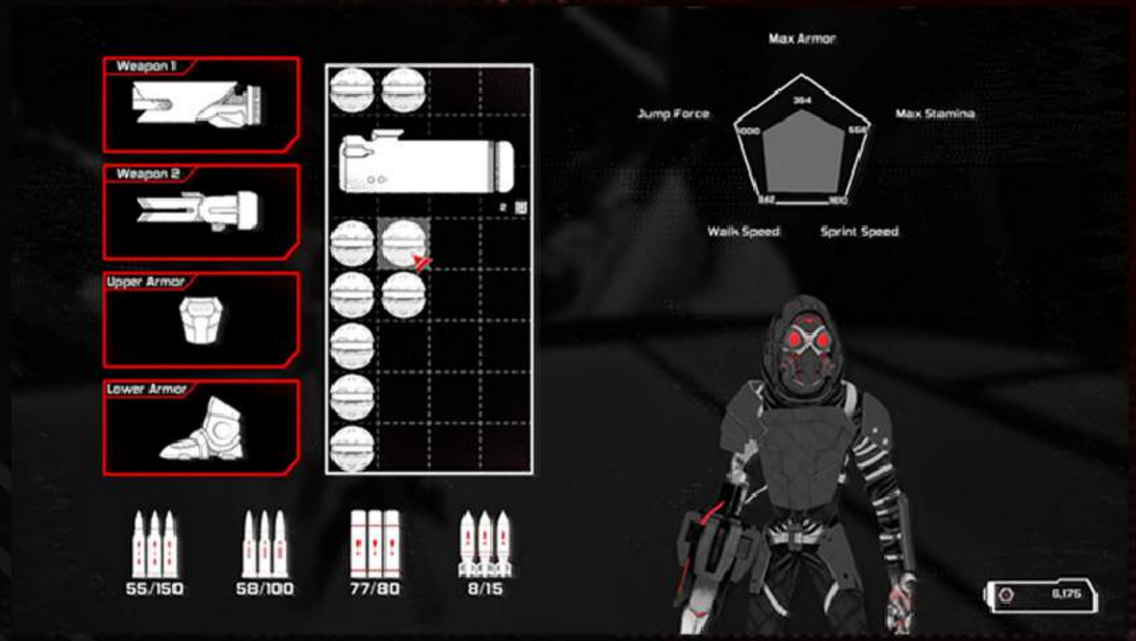

**Starting from several drafts to the final version, I studied the balance of the elements to ensure all information could be read clearly, using icon size and visual weight without sacrificing the overall visual appeal.**

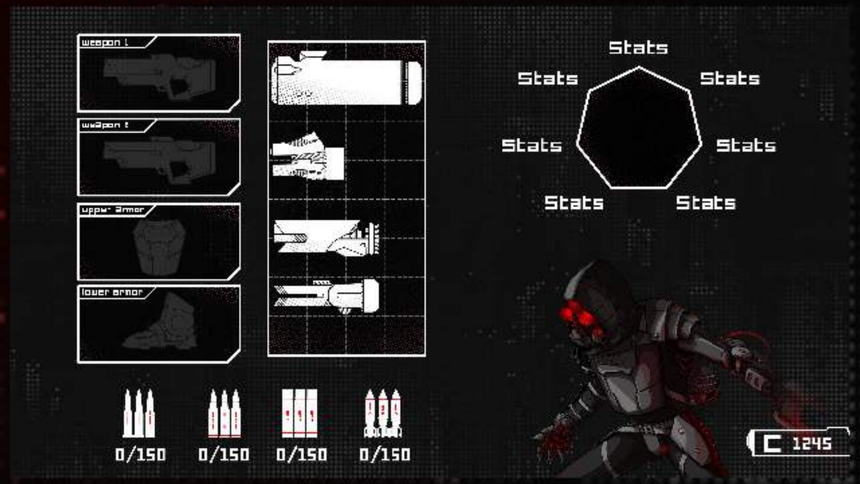

**The item hierarchy starts with currently equipped gear, followed by the inventory of owned and equipable items, ammunition, and finally stats.**
**The front-facing 3D character model and in-game currency act as secondary visual references.**

# Big Bro App

Gamified Twitch companion App

## CHALLENGE

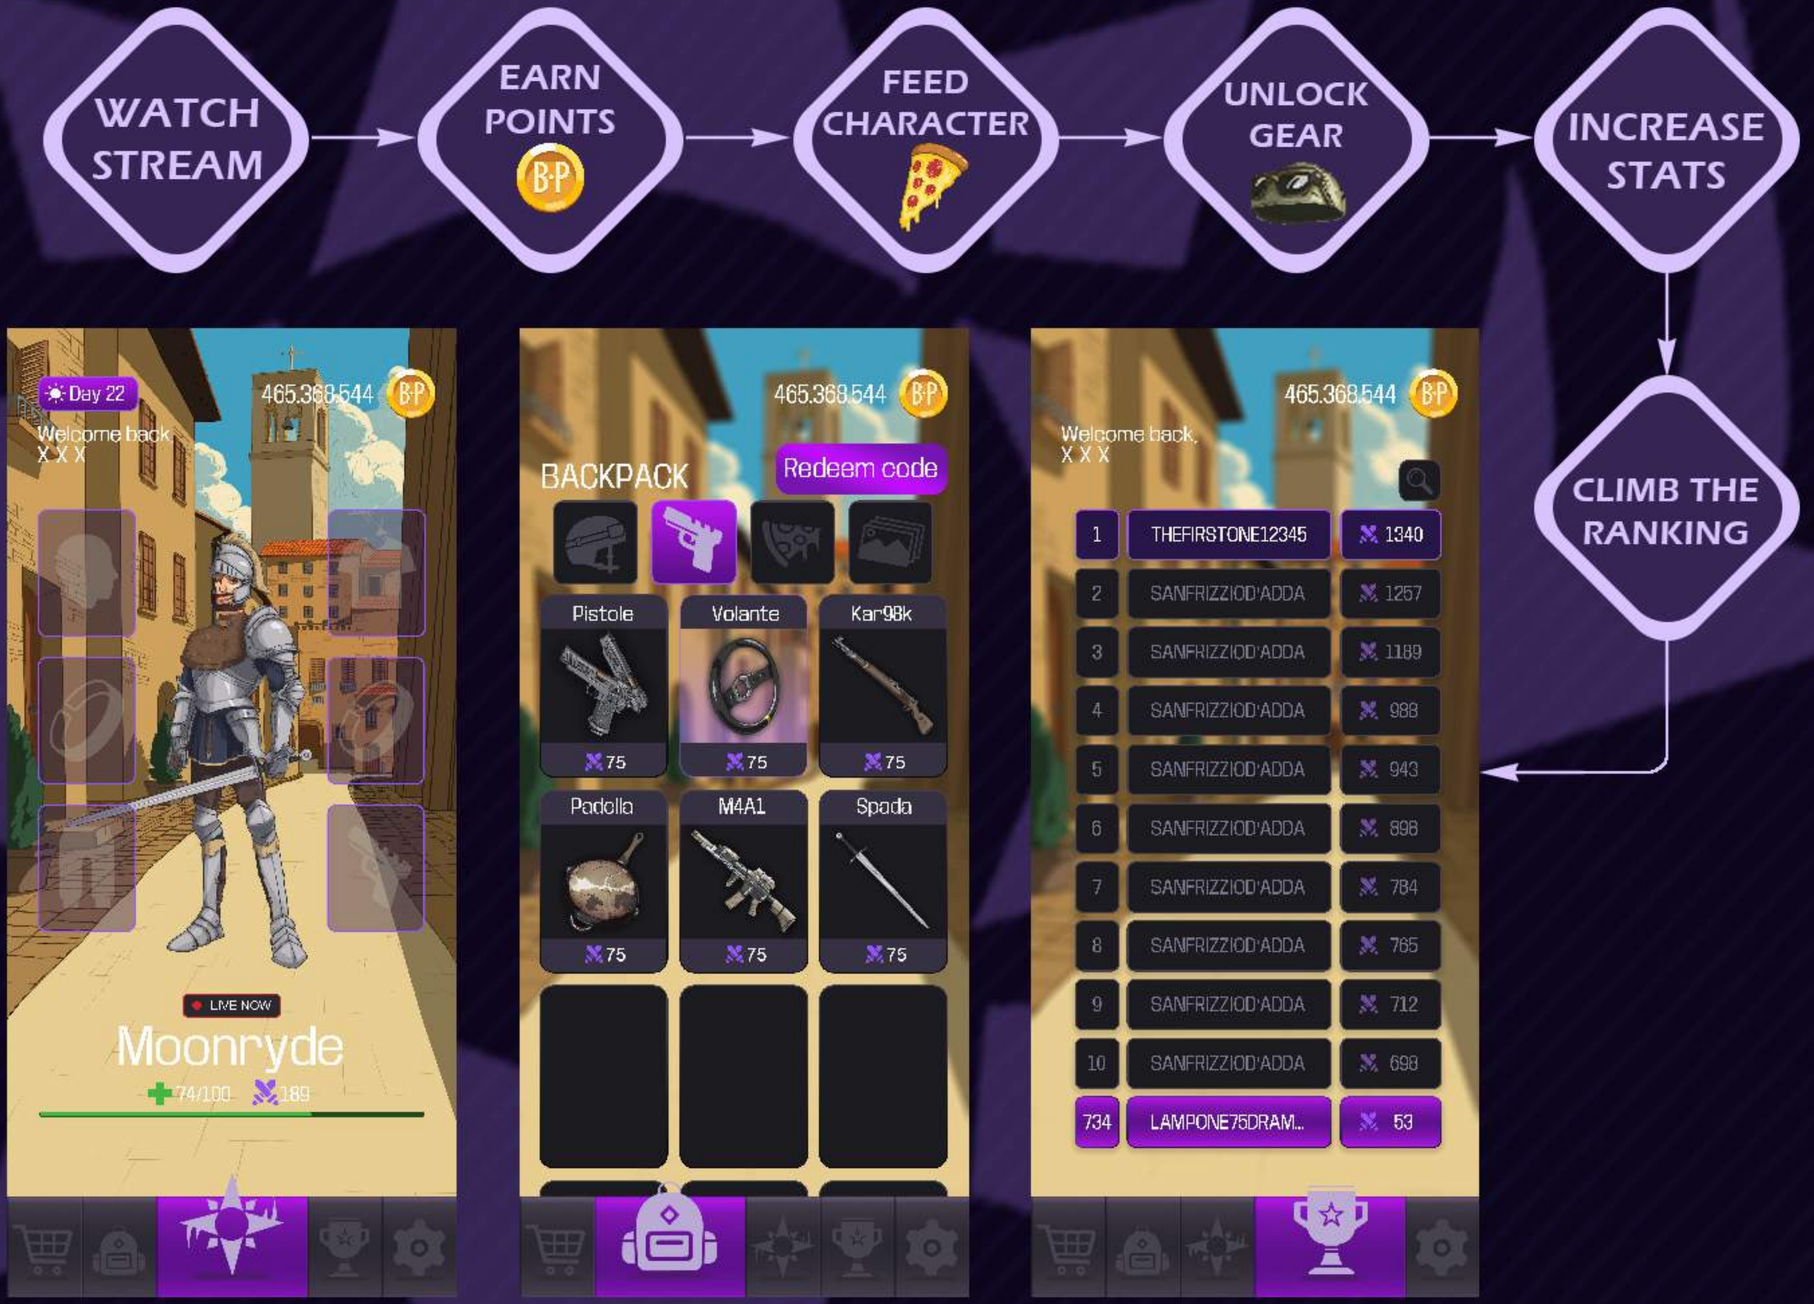

Design a companion app that turns Twitch viewers into active players through persistent progression.

## COSTRAINTS

- Short play sessions.
- Immediate readability.
- Twitch-based economy.
- Mobile only.

## SOLUTION

- Simplified navigation.
- Persistent character status.
- Large progression indicators.

## CHALLENGE

**Develop an engaging color palette inspired by Twitch's visual identity.**

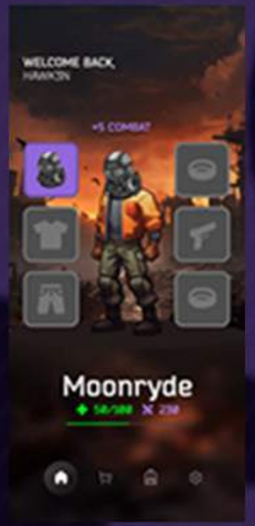

## SOLUTION

**An indigo-based palette transitioning toward Twitch purple, with green and red reserved for interaction feedback.**

## PALETTE

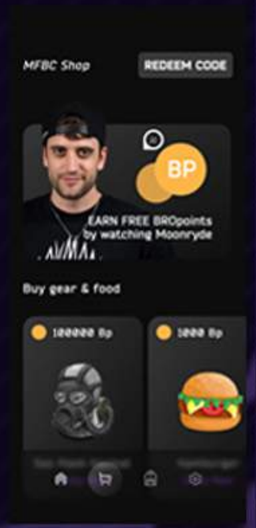

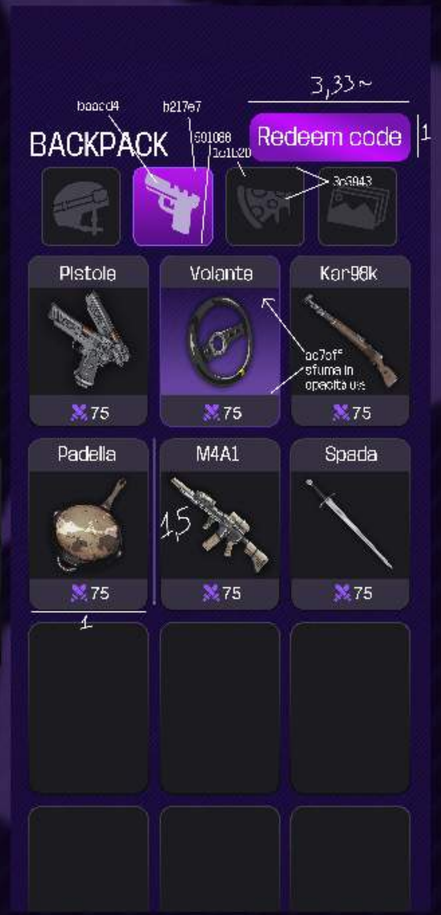

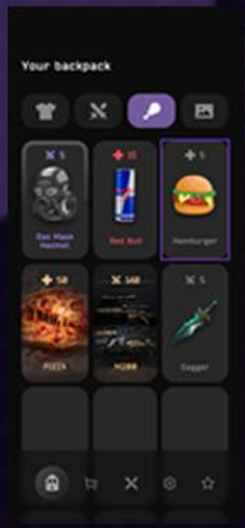

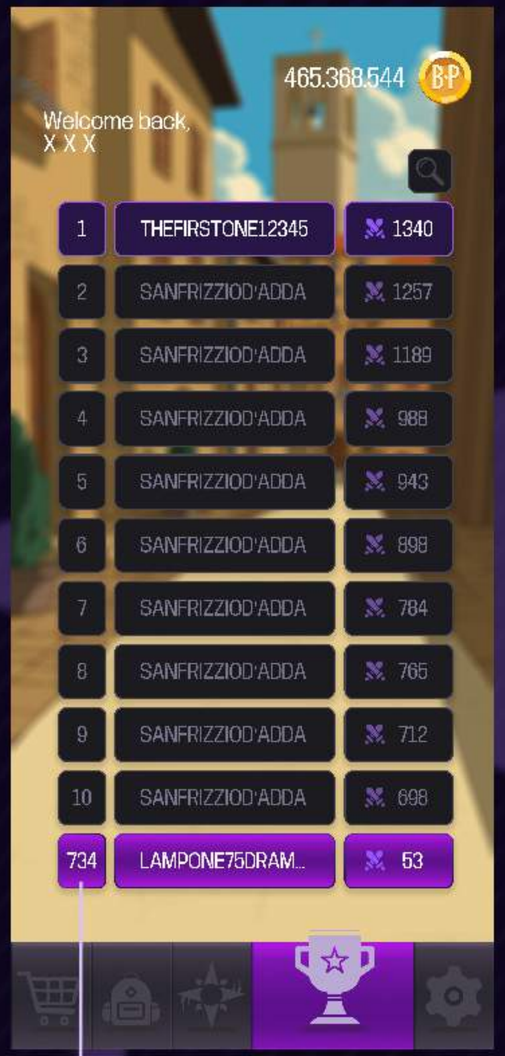

# VISUAL ASSETS

Character, equipment and reward assets created to support the app's progression system.

Character customization and a variety of clothing sets.

Makes the user's position easy to identify while keeping the top 10 visible by default.

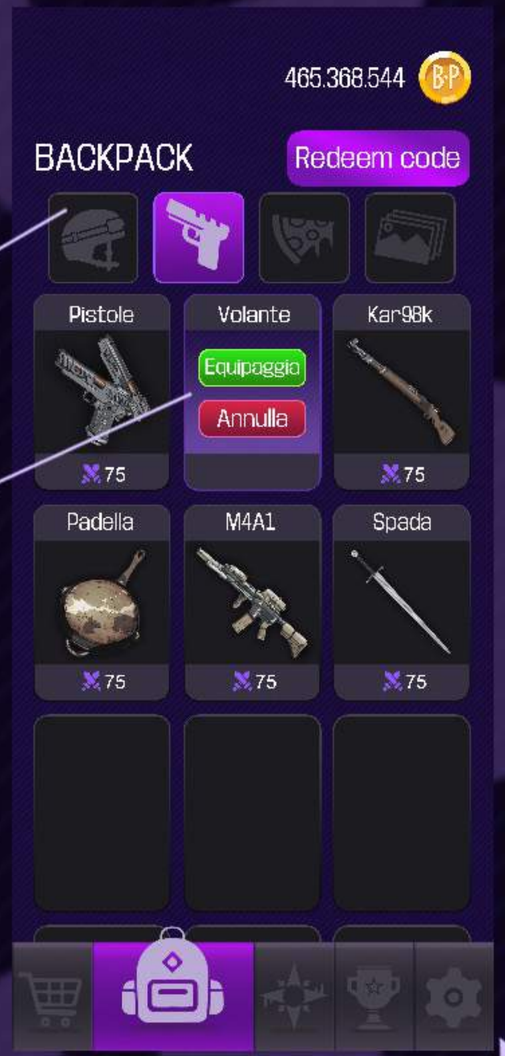

Selected tab clearly highlighted for immediate recognition.

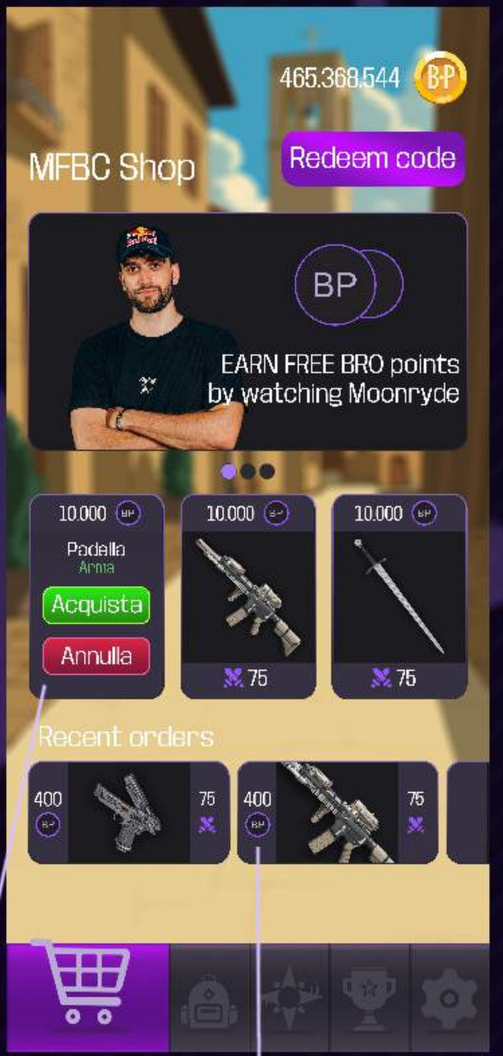

Inventory sections organized by item type.

Intuitive gear selection.

Indicator showing when the streamer is

Simple way to purchase gear.

Easy way to track recent in-game purchases

# UI COMPONENT

## BADGES
Selected and deselected in the inventory.

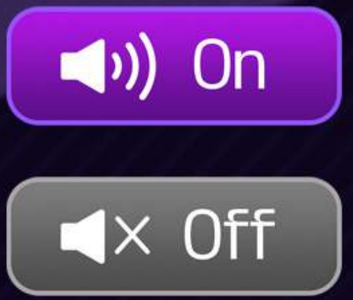

## BADGES
In-game purchase in the shop

## INVENTORY CARDS
Selected and deselected inventory states.

## BUTTONS
Active and inactive button states.

## ICONS
White filled icons designed for dark UI.

# Wave

Browser game for corporate events

LOGIN → PLAY → JUMP & SLIDE → COMPETE WITH FRIENDS → HAVE FUN

## CHALLENGE

Design the UI, for Socialbooth company, for a fast-paced advergame intended for live corporate events, ensuring immediate readability and intuitive interactions for players of all experience levels.

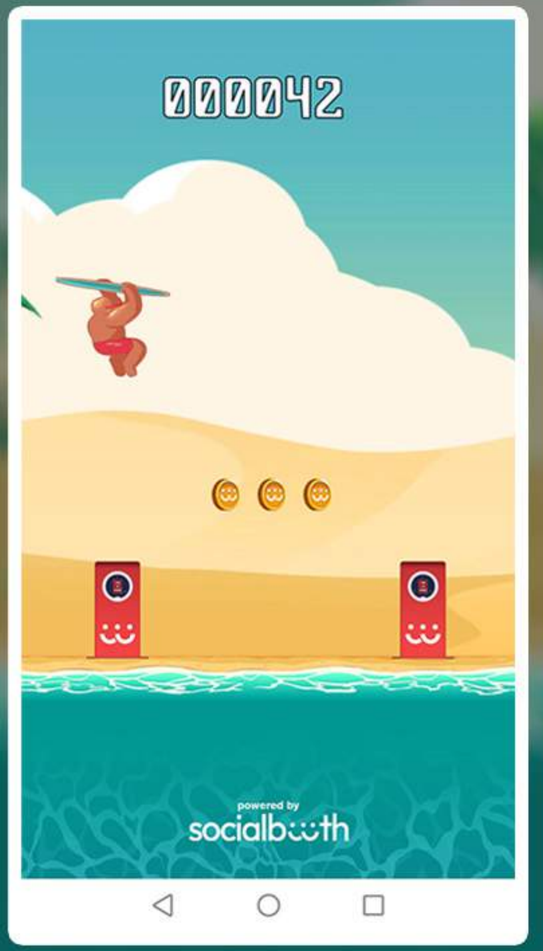

## COSTRAINTS

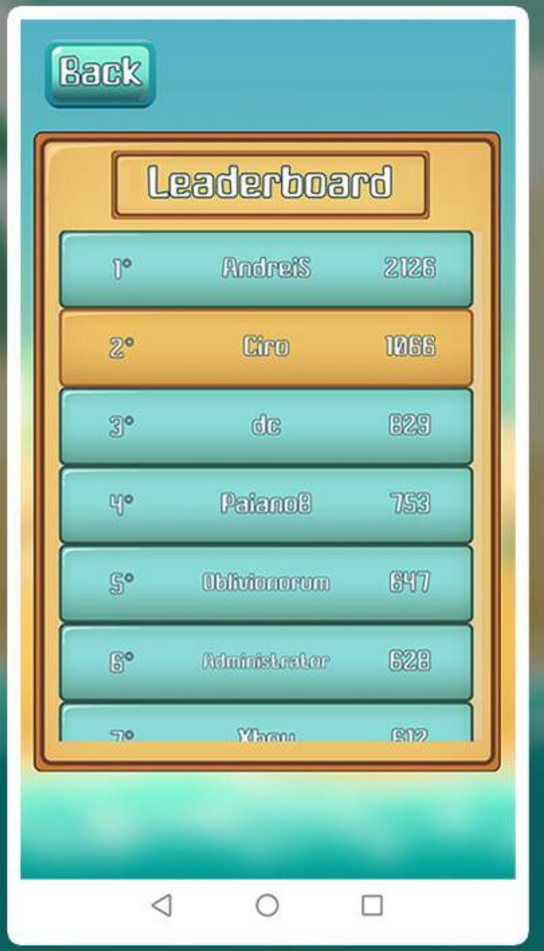

- Clear visual hierarchy.
- Easily recognizable icons.
- Minimal learning curve.
- Designed to remain readable on large event displays.

## SOLUTION

- Simplified navigation for all players.
- Simple and readable design.

## CHALLENGE

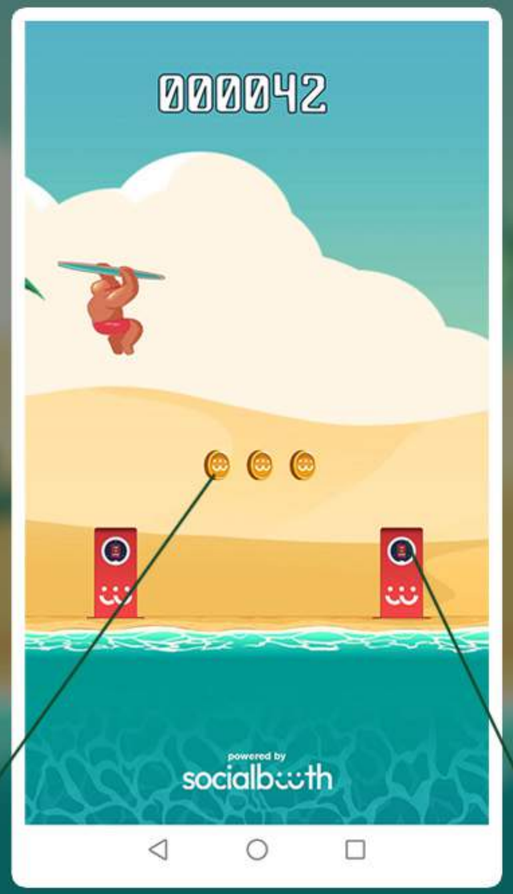

**Make the game appealing to companies looking for an engaging experience for their events.**

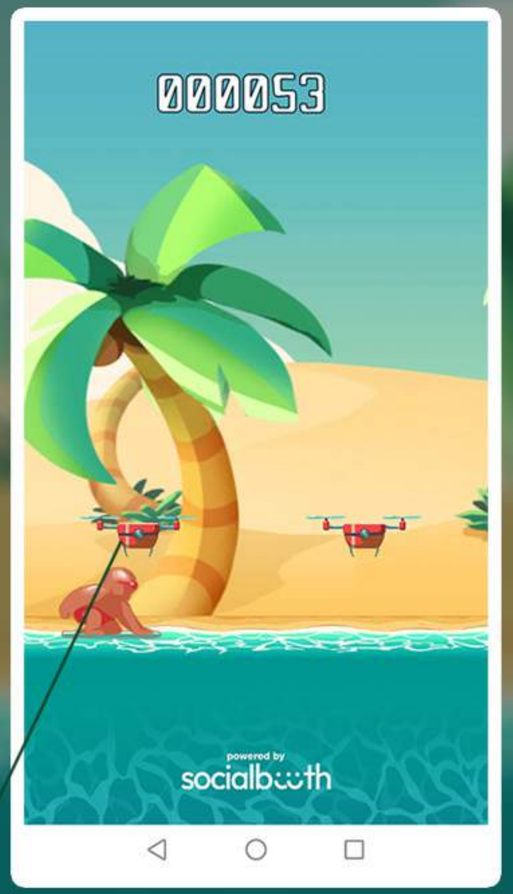

## SOLUTION

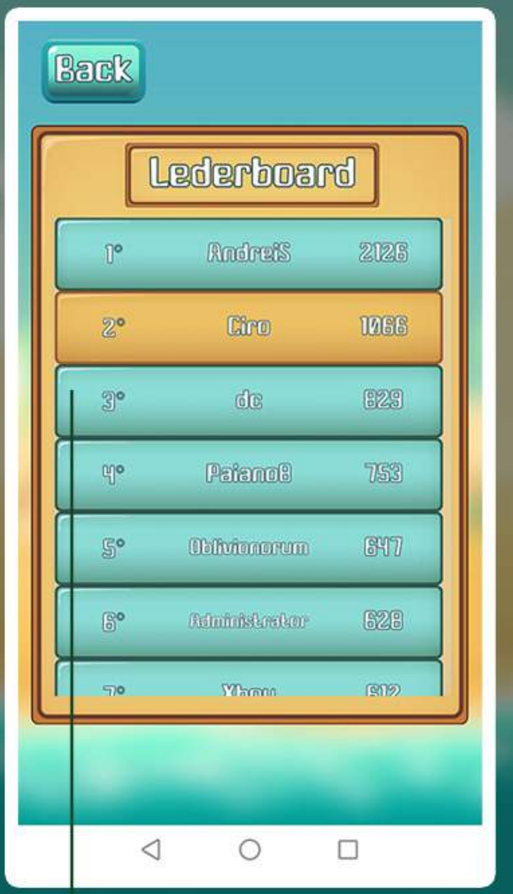

**A summer-themed visual direction with simple, on-theme animations, using totems and drones as obstacles to create a more engaging experience for corporate events.**

Clear score indicator showing points earned.

Animated coins inspired by classic arcade games.

High-contrast obstacles remain clearly readable against the environment, easily recognizable for players of all experience levels.

Arcade-style leaderboard allowing players to enter a custom name during the event.

# Visual Asset

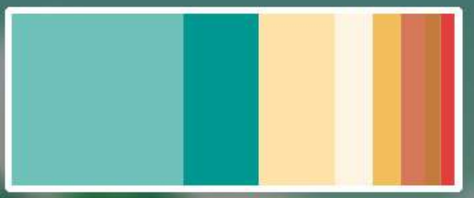

**Everything was designed to maintain a playful and cohesive visual style.**

PALETTE

# It's MY turn

Game prototype - Toy Story inspired turn-based game.

CHOOSE TOYS → DEPLOY → PLAN → USE ABILITY → FIGHT TO THE LAST PIECE

## CHALLENGE

Designing the UI to feel like a child's game, using cardboard and stickers as visual elements.

## COSTRAINTS

- Cardboard-based visual language.
- Sticker-based visual elements.
- Playful aesthetic.
- Clear readability.

## SOLUTION

- Using cardboard as the base for buttons and stickers as the main treatment for text.
- Using imagery alongside text to maintain a playful tone.

## CHALLENGE

Choose colors for the two teams without making them overly saturated, while keeping them consistent with the game's warm palette.

## SOLUTION

Light orange and light blue were chosen to distinguish the two opposing teams while remaining consistent with the game's warm cardboard palette.

## PALETTE

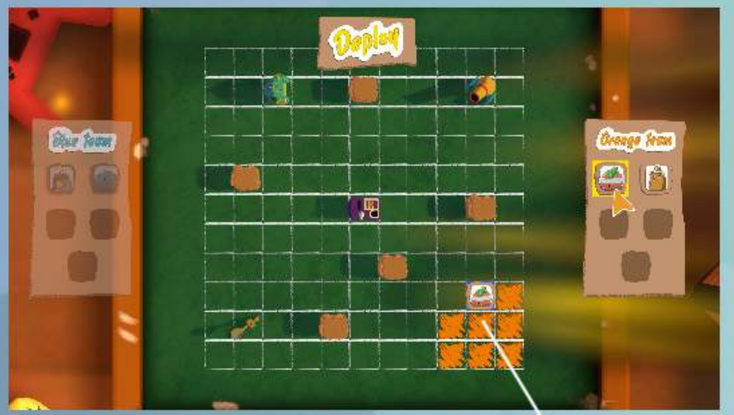

Cardboard-style highlight used to indicate when a team is selecting a toy.

Game currency used to purchase toys at the beginning of the game and activate machines, during the match, that damage the opponent.

Each character has a marble cost; the selected card rises above the others for emphasis.

Deployment zone changes color based on the team deploying its units.

Basic movement zones use a lighter color than the extra movement zone, after which no offensive actions can be taken.

Custom skills for each toy, including active abilities with cooldowns and passive abilities.

# Visual assets

Selectable character icons that change color according to their team.
Unique ability icons for each character, with colors that also change according to their team.

# Visual assets

Custom names for each toy, based on the names of the game developers.

Cardboard elements are used for buttons both in-game and in the options menu, evoking the way a child might create written game rules.
